

INDEPENDENT · MEASURED · SOURCED

What people actually save about Grok Bot

Which Grok Bot posts on X get bookmarked, which only get seen, and what nobody posts yet.

Posts collected	3,826
Accounts	2,623
Posted	11 Aug - 16 Oct 2026
Ranked (at least 5,000 views)	557
Bookmarks on ranked posts	218,384
Elon Musk reposts, separate sample	48

Measured cost per task in any ranked post 0

Last updated 18 October 2026 · data fetched 16 October 2026 · [agentreceipts.dev/report](#)

Key findings

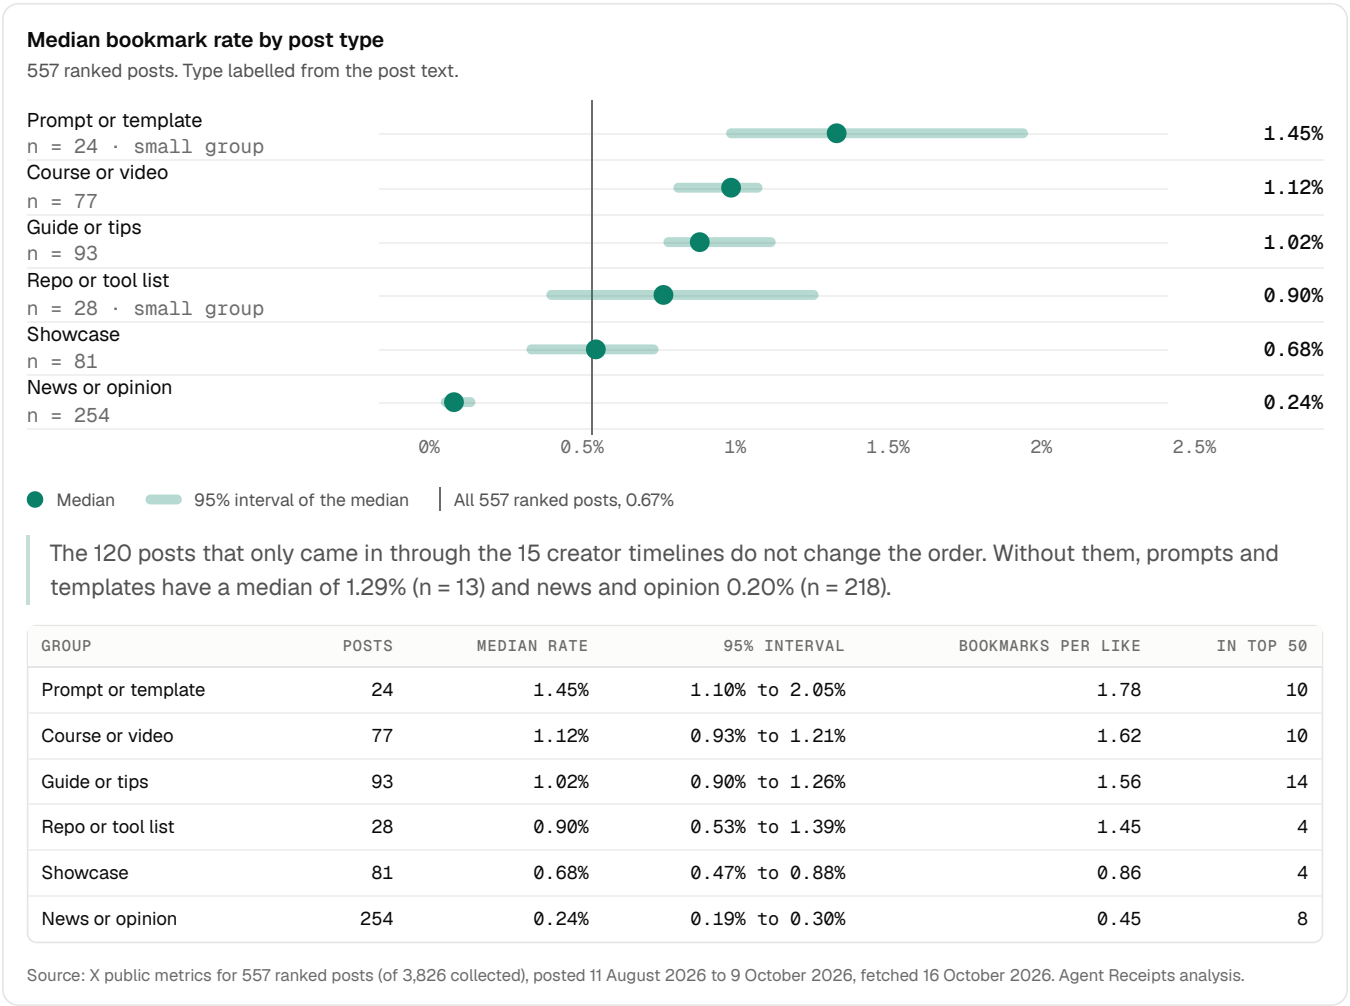

01 1.45% vs 0.24%	Copyable posts get saved about 6 times as often as news. Median bookmark rate for prompts and templates is 1.45% (n = 24); for news and opinion it is 0.24% (n = 254). Courses, guides and repo lists sit in between.
02 0.06	Views say almost nothing about saves. The rank correlation between views and bookmark rate is 0.06 (n = 557). The 10 most viewed posts rank between #286 and #541 on saves.
03 1.05%	Work topics are saved most; personal use is not. Engineering posts have a median rate of 1.05% (n = 171), business 0.94% (n = 120). Personal posts reach 0.39% (n = 20) and 0 of them made the top 50.
04 19 of 50	The top 50 point to something you can copy. 19 of the top 50 mention a prompt, template or copying in their first 200 characters, against 13% of the other 507. Questions (1 of 50) and all-caps openers (0) barely appear.
05 23 of 48	Elon Musk reposts everyday use cases, and fast. 23 of the 48 reposts we found show a concrete task a bot did. Median time from post to repost: 4.7 hours. 17 of the original posters had fewer than 50,000 followers.
06 0 of 557	No ranked post reports a measured cost per task. 59 posts mention money, tokens or usage in their first 200 characters; 21 of those are savings or revenue claims. None says what a specific task cost to run and how that was measured.
07 20%	Of the top 50, 20% carry a safety flag. 5 financial or scam risk, 4 broad account access, 1 asking for keys or passwords. Across all 557 ranked posts it is 27%.

How to read the numbers

Bookmark rate is bookmarks divided by views. We compare medians with their 95% interval and always give the number of posts (n). A group under 30 posts is marked as small. All numbers come from one script run on the data described in [section 08](#).

Posts you can reuse get saved. News gets read and left.

Bookmark rate is bookmarks divided by views. We compare medians, because a few viral posts would pull an average anywhere. The line around each median is its 95% interval: if two lines overlap, treat the groups as close.

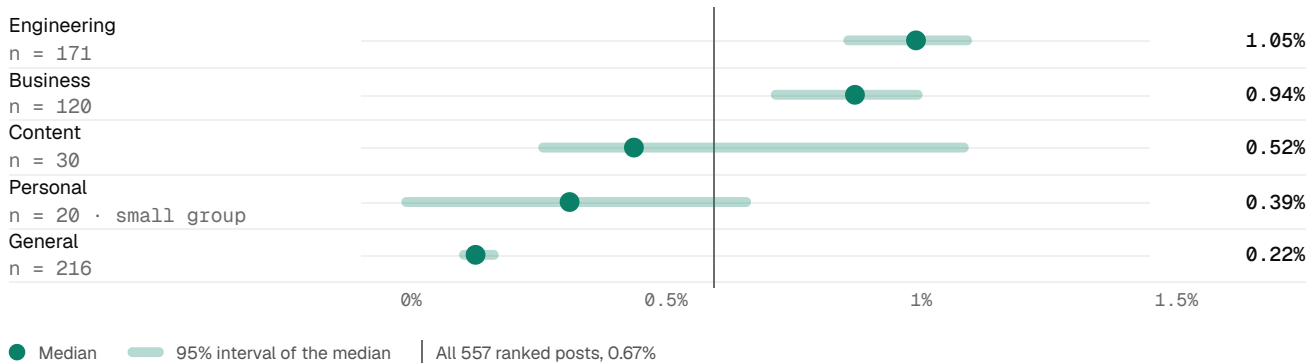

Bookmarks per like tell the same story. For prompts and templates the median post gets 1.78 bookmarks per like; for news and opinion 0.45. People like the news and save the setup.

Prompts and templates are a small group (n = 24), so their interval is wide: 1.10% to 2.05%. Even its lower end is above the upper end for news (0.30%).

Median bookmark rate by category

557 ranked posts. Category labelled from the post text.

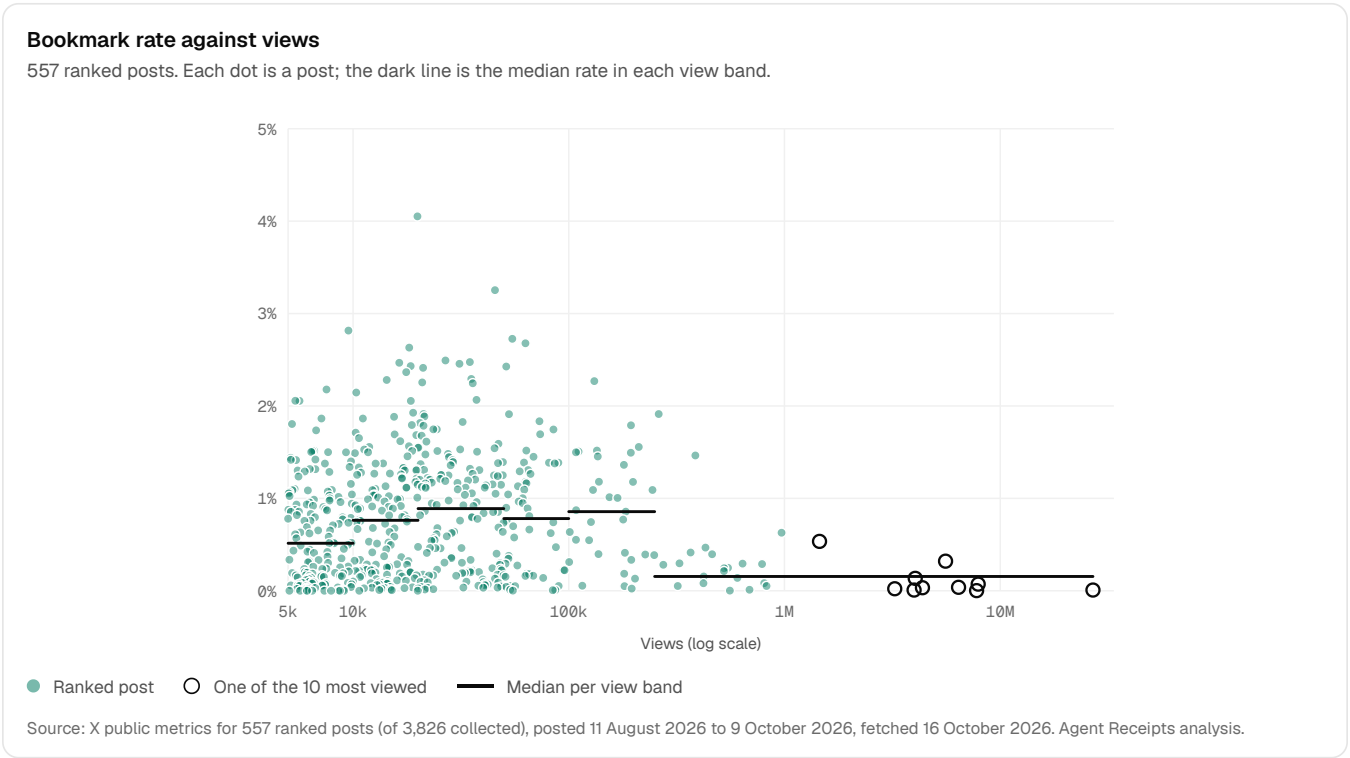

GROUP	POSTS	MEDIAN RATE	95% INTERVAL	BOOKMARKS PER LIKE	IN TOP 50
Engineering	171	1.05%	0.92% to 1.16%	1.48	17
Business	120	0.94%	0.78% to 1.07%	1.37	12
Content	30	0.52%	0.33% to 1.16%	1.33	4
Personal	20	0.39%	0.08% to 0.74%	0.66	0
General	216	0.22%	0.18% to 0.26%	0.41	17

Source: X public metrics for 557 ranked posts (of 3,826 collected), posted 11 August 2026 to 9 October 2026, fetched 16 October 2026. Agent Receipts analysis.

What does not get saved: general news about Grok Bot (the largest group, n = 216) and personal use. Posts about personal life admin have a median of 0.39%, and the group is small, so read that number with care.

The most viewed posts are not the most saved.

Across the 557 ranked posts, the rank correlation between views and bookmark rate is 0.06. In plain terms: knowing how often a post was seen tells you almost nothing about how often it was saved.

Rate per view band

VIEWS	POSTS	MEDIAN RATE	95% INTERVAL
5k–10k	155	0.51%	0.32% to 0.72%
10k–20k	142	0.76%	0.49% to 0.93%
20k–50k	142	0.89%	0.64% to 1.12%
50k–100k	54	0.78%	0.38% to 1.09%
100k–250k	33	0.86%	0.41% to 1.18%
250k or more	31	0.16%	0.05% to 0.29%

The median rate peaks at 0.89% for posts with 20k–50k views. Above 250k it drops to 0.16% (n = 31). Those 31 posts have 83% of all views of the ranked posts and 36% of the bookmarks.

The 10 most viewed

CREATOR	TYPE	VIEWS	RATE	RANK ON SAVES
@elonmusk	News or opinion	26,906,993	0.01%	#529
@minchoi	Guide or tips	7,906,990	0.07%	#458
@0xSweep	Repo or tool list	7,770,224	0.00%	#541
@a16z	News or opinion	6,408,417	0.04%	#489
@sairahul1	Guide or tips	5,580,740	0.32%	#333
@elonmusk	News or opinion	4,358,419	0.03%	#497
@gregisenberg	News or opinion	4,036,115	0.13%	#418
@elonmusk	News or opinion	3,985,949	0.01%	#530
@elonmusk	News or opinion	3,241,870	0.02%	#505
@mattyp	News or opinion	1,453,962	0.53%	#286

7 of the 10 are news or opinion, from 7 accounts; @elonmusk alone has 4. None of them is in the top 50.

What the top 50 have in common

The top 50 by Wilson lower bound, compared with ranks 51 to 557. Text features are keyword matches on the first 200 characters of each post, the part we stored.

Types

TYPE	IN TOP 50	OF THAT TYPE	OF THE TOP 50
Prompt or template	10 of 24	42%	20%
Guide or tips	14 of 93	15%	28%
Repo or tool list	4 of 28	14%	8%
Course or video	10 of 77	13%	20%
Showcase	4 of 81	5%	8%
News or opinion	8 of 254	3%	16%

10 of the 24 prompt and template posts made the top 50. Of 254 news and opinion posts, 8 did.

Text features

IN THE FIRST 200 CHARACTERS	TOP 50	RANKS 51-557	MEDIAN RATE WITH	WITHOUT
Mentions a prompt, template, copy, steal or paste	19 (38%)	65 (13%)	1.29% (n = 84)	0.53%
Numbered steps, arrows or bullets	10 (20%)	73 (14%)	1.16% (n = 83)	0.54%
Points to official material (SpaceXAI, a workshop, a session, engineers)	20 (40%)	159 (31%)	1.07% (n = 179)	0.41%
Names a dollar amount	2 (4%)	25 (5%)	0.86% (n = 27)	0.65%
Starts with "I" or "My"	5 (10%)	45 (9%)	0.50% (n = 50)	0.71%
Tags another account (not @bot or @grok)	3 (6%)	21 (4%)	0.22% (n = 24)	0.72%
Asks a question	1 (2%)	15 (3%)	0.20% (n = 16)	0.70%
Asks readers to bookmark or save it	3 (6%)	5 (1%)	1.13% (n = 8)	0.65%
Opens in capitals	0 (0%)	22 (4%)	0.33% (n = 22)	0.68%

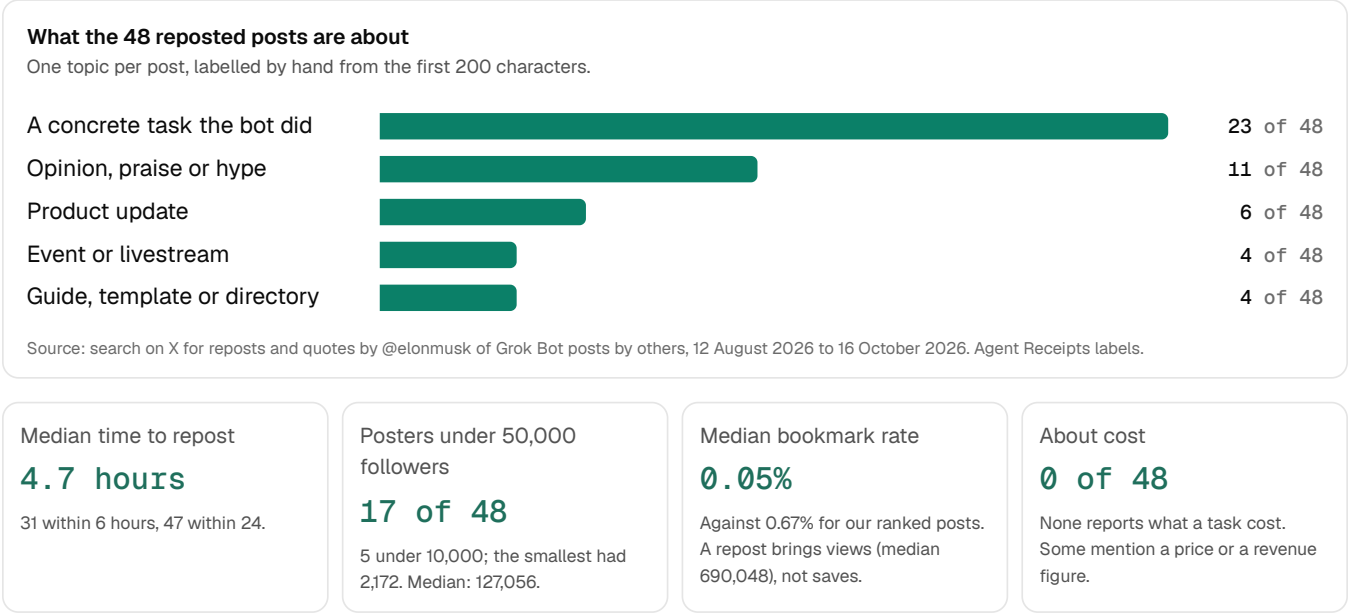

What works: pointing to something reusable. 19 of the top 50 mention a prompt, template or copying, against 13% of the rest. What does not: first-person stories (median rate 0.50%), tagging other accounts (0.22%) and questions (0.20%), all below the 0.67% median of all ranked posts. These are associations in our sample, not causes.

Creators

The top 50 come from 27 creators. Three of them hold 19 places: @unicodef1wn (8), @0xRafy (6), @1920web1080 (5). Read this with care: 25 of the top 50 were found through the timelines of the 15 creators we collected separately, so those creators are over-represented. Median views in the top 50 are 21,160, against 17,651 for the rest: a top post does not need a big audience.

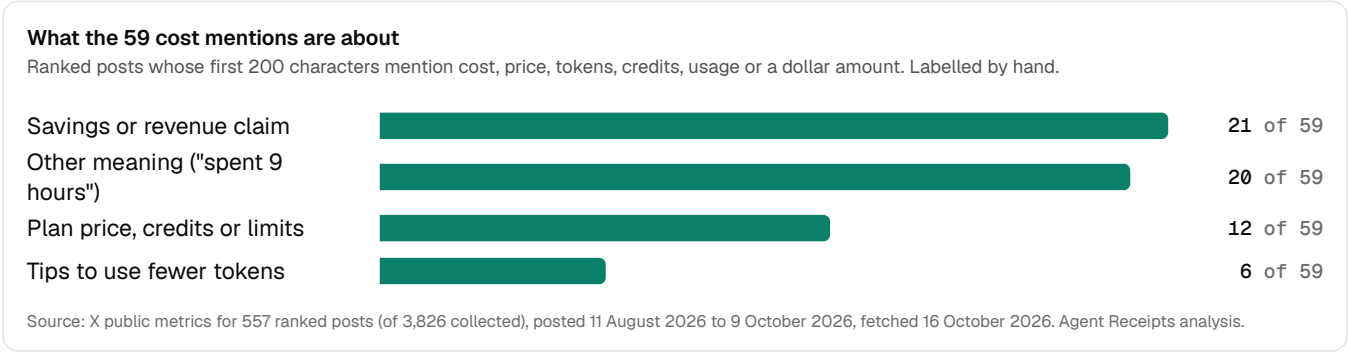

48 reposts: use cases with proof, picked up within hours

A separate sample: 48 Grok Bot posts by other accounts that @elonmusk reposted (28) or quoted (20) between 12 August 2026 and 16 October 2026; 26 of them in October. Search returns at most 25 results per query, so the real number is higher.

Nobody posts what a task costs

59 of the 557 ranked posts mention money, tokens or usage. We read all of them. 0 report a measured cost per task: the tokens or usage one run of a defined task took, and how that was measured.

Savings and revenue claims are the biggest group: a stack of bots that "replaces" a salary or a SaaS bill, or a side business with a monthly figure. They are not measurements, and we could not check them. Plan prices, credits and usage limits come next, followed by tips to burn fewer tokens. The tips are popular, which suggests people do run into limits.

This is the gap Agent Receipts is built for. We are measuring 40 fixed everyday tasks with tokens, pass or fail and share of the weekly usage pool. The first round has not run yet, so there are no numbers to show. The [costs page](#) says what each result will include.

27% of ranked posts carry a safety flag

A language model read each post and flagged three risks; a keyword list added a fourth, weaker signal. Linked prompts, repos and videos were not opened, so no flag is not the same as safe.

POSTS	ANY FLAG	BROAD ACCOUNT ACCESS	FINANCIAL OR SCAM RISK	ASKS FOR KEYS, PASSWORDS OR LOGINS	KEYWORD ONLY
TOP 25	6 (24%)	1	4	1	0
TOP 50	10 (20%)	4	5	1	0
ALL 557 RANKED	152 (27%)	92	37	7	16
ALL 3,826 COLLECTED	897 (23%)	434	320	34	109

Source: X public metrics for 557 ranked posts (of 3,826 collected), posted 11 August 2026 to 9 October 2026, fetched 16 October 2026. Flags from the post text only. Agent Receipts analysis.

Broad account access is the most common flag: 92 of 557 ranked posts suggest connecting a bot to email, socials or a computer with wide permissions. Financial or scam risk follows with 37: trading agents, tokens and income claims. In the top 50 the order flips: 5 financial, 4 broad access.

Before you copy a setup

- Give a bot only the accounts and permissions the task needs. Try it on a test inbox or a spare account first.
- Do not paste API keys, passwords or SSH keys into a chat or into a template from someone you do not know.
- Treat trading agents, tokens and income claims as high risk. We do not test them and do not recommend them.
- Read the linked prompt or repo yourself before running it. Our flags only cover the post text.

Top 25 of all time

Ranked by the 95% Wilson lower bound of bookmarks per view, which pulls posts with few views down a little. One line per post in our own words; open the link for the post itself. We do not copy prompts.

All 557 ranked posts, with filters: <https://agentreceipts.dev/most-bookmarked>

How we got these numbers

- Collection: read-only search on X public metrics, fetched 16 October 2026. Per day since launch, the query "Grok Bot" OR grokbot OR "grok bots" plus topic variants, the timelines of 15 creators who post often about Grok Bot, and quote posts of 8 top posts. 3,826 posts from 2,623 accounts, posted 11 August 2026 to 16 October 2026.
- This is a sample, not a full count. Search returns about 25 posts per page and we read the 2 most relevant pages per day. Even posts with a lot of reach can be missing: of the 48 posts Elon Musk reposted, only 3 are in our collection. Read the numbers as patterns in a large sample of Grok Bot posts, not as totals for all of X.
- Ranked posts: at least 5,000 views, at least 7 days old, not a reply, on topic. That leaves 557 posts with 218,384 of the 249,769 bookmarks in the set.
- Labels: category, type and safety flag come from a language model reading the post text, with a keyword list as an extra safety signal. 319 of the 557 ranked posts have a low-confidence label (1,899 of all 3,826). We did not relabel them by hand.
- Text features use the first 200 characters of each post, which is all we stored. Longer posts are cut off, so a feature further down a post is missed.
- The 15 creator timelines add posts that search alone would not find, so those creators are over-represented. Without the 120 timeline-only posts the type ranking stays the same.
- Medians come with a 95% interval from order statistics, which needs no assumption about the distribution. Groups under 30 posts are marked as small.
- The Elon Musk reposts are a separate search sample; the topic labels and the cost labels are ours, made by hand from the first 200 characters.
- Views and bookmarks keep growing after collection. That drift changes the numbers more than the choice of ranking method does.
- We publish handles, links, metrics and our own labels and summaries. No post text, no prompts.

Found an error? Mail hello@agentreceipts.dev; we fix it within 48 hours and log it on the [corrections page](#). The ranked data is on [Most Bookmarked](#), with a [CSV download](#).
